

Roofgard Plant & Equipment Support System

Supports virtually any
rooftop mounted
equipment & services
while protecting
waterproofing integrity

One of a range of Roofgard accessories specially designed
to meet the exacting standards of modern flat roofing

Roofgard Plant & Equipment Support System

Roofgard Plant & Equipment Support System from Anderson Monarflex provides a highly cost effective way of supporting rooftop equipment and services without penetrating the waterproofing, helping to extend the roof's economic life. The system is lightweight and easy to handle, quick to erect on site and easily able to incorporate last-minute or future design modifications.

Features and Benefits

- Doesn't penetrate the roof waterproofing, eliminating the need for difficult and costly detailing
- Quickly accommodates future modifications to equipment or services
- During roof maintenance each support leg can be removed independently allowing access to the membrane below
- Allows easy refurbishment later in the roof's lifecycle
- No cold bridging of supports
- Separates the M&E and roofing trades – engineers are then able to work without disturbing the waterproofing and its guarantees
- Less co-ordination of different subcontractors simplifies project management
- Standard Roofgard Plant & Equipment Support System products are available for most situations
- Technical advice and site visits where appropriate are available from the Icopal technical team

Roofgard Plant & Equipment Support System in new build

Conventionally, the location of supports has to be made early in the design phase, often before the mechanical and electrical engineers have detailed their requirements. This can result in over- or under-specification and lack of supports where they are ultimately needed, slowing the project and adding to costs. Roofgard Plant & Equipment Support System gives you the flexibility to configure supports when the true equipment and services layouts are known.

Roofgard Plant & Equipment Support System in refurbishment

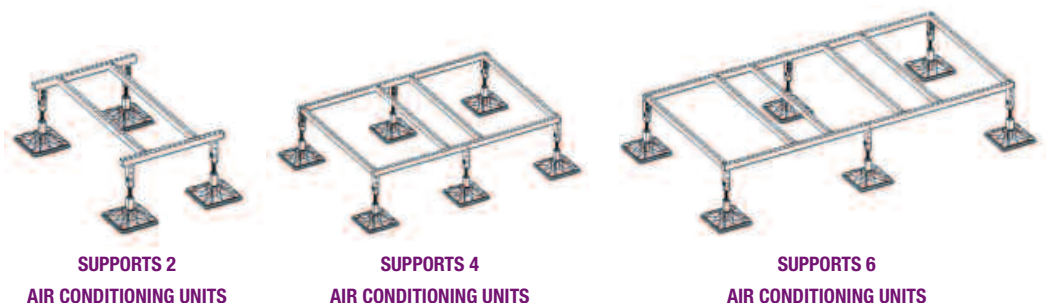

Clients will often find it unacceptable to decommission equipment during roof refurbishment – or it may simply be impractical. Roofgard Plant & Equipment Support System allows for virtually any equipment and services to be quickly supported without penetrating the waterproofing. Inadequately detailed supports can then be quickly removed and the integrity of the roof restored, ensuring that the new roof doesn't suffer the same design weakness as the one before.

HELP & SUPPORT

For further information or technical support on the Roofgard Plant & Equipment Support System phone **0161 865 4444** or visit www.icopal.co.uk

TYPICAL CONFIGURATIONS

Some typical Roofgard Plant & Equipment Support System configurations – virtually any size or weight of unit can be accommodated.

**TWIST-AND-SECURE
FIXING SYSTEM**

The Roofgard Plant & Equipment Support System features a special twist-and-secure fixing system that can be operated with one hand, making installation simpler and quicker.

**A COMPREHENSIVE RANGE
OF SUPPORTS**

Roofgard Plant & Equipment Support System units are available to support virtually any rooftop equipment and services including pipes, ductings, condensers, cable trays, AHUs, chillers, extractors, air conditioning, power cables, security cameras and satellite dishes.
