## 1 Upright Pipe

The upright pipe is a high quality stainless steel pipe with polyester reinforced modified membrane flange factory sealed around the upright pipe. The felt membrane is dressed within the layers of the built-up system. The built-up system is finished flush with the base of the stainless steel upright pipe.

## 2 Telescopic Double Pipe

The high quality stainless steel telescopic double pipe slides on to the upright pipe and into the soil vent pipe. An internal seal is achieved between the smaller diameter of the two pipes and the soil vent pipe via a rubber "O" ring. The telescopic double pipe is positioned at the correct height and fixed to the upright pipe with self-tapping screws.

## 3 Vented Cowl

The high quality stainless steel vented cowl is fitted on top of the telescopic double pipe and is fixed with self-tapping screws. The vented cowl prevents large obstructions from blocking the Cowled Telescopic Vent.

## Technical Details

### Dimensions

Diameter: 130/90mm with steel top height adjustable with inner pipe

Pipe length: 300-600mm

## Roofgard Accessories Range

A range of accessories specially designed to meet the exacting standards of modern flat roofing whilst maintaining the waterproofing integrity of the roof. Range includes:
