

CPD seminars from the Icopal Academy

The Icopal Academy is pleased to offer a number of technical seminars on leading products and applications within the Building Industry. Presented by experienced specification consultants, our seminars provide an insight into the world of structural waterproofing, acoustics, airtight design, roofing membranes and more.

Seminar 1

Air tightness systems

Legislative and environmental drivers of airtight systems. How to achieve air tightness and the importance of a system approach.

Seminar 2

Development of single ply membranes

Benefits of single ply roofing as an alternative flamefree, lightweight, environmentally friendly system to traditional multilayered bituminous schemes and the relevant legislation involved.

Seminar 3

Pitched roofing design & detailing

Pitched roof underlay systems, benefits, features and design considerations in terms of correct specification and installation. Covers relevant building regulations, standards and environmental issues.

Seminar 4

The use of flexible membranes & acoustic systems in construction

How technological advances in construction membranes have expanded their application range and how, correct specification and installation can address a wide range of common acoustic problems.

Seminar 5

Roof tiles with a heart of steel

Features and benefits of lightweight steel roof tile systems and their application in relation to flat to pitch, over roofing and new build projects along with their ability to meet the "secure by design" requirements.

Seminar 6

Structural waterproofing – dpc design & detailing

This seminar discusses the regulations covering the specification and installation of dpcs, and provides guidance on the installation techniques relevant to a variety of building types. Highlights common problems and failures offering practical solutions for problem areas.

Seminar 7

Development of bituminous waterproofing membranes including firesmart & flame free application

Development of bituminous flat roof membranes, how recent innovations in materials and techniques are changing traditional thinking and how advances in technology are influencing application methods used in flat roof construction friendly system to traditional multilayered bituminous schemes and the relevant legislation involved.

Seminar 8

The Innovative & sustainable roofing solutions

Innovations within the flat roofing sector which create a positive impact on the environment. Outlines waterproofing membranes and systems that actively reduce air pollution levels; thin-film photovoltaic's; green roof solutions; and how these systems provide active benefits for the environment.

an eco-activ solution

The Icopal Academy is happy to arrange seminars at your premises at a convenient time to you including lunchtimes and early evenings with free refreshments provided.

To arrange a seminar please email cpd.uk@icopal.com or contact your local Area Specification Manager through our website www.icopal.co.uk or complete and return the Fax-Back Form overleaf.

Icopal CPD seminar request

Fax-Back Form to 0161 866 9859

Icopal offer a range of 1-hour CPD seminars. We are happy to arrange seminars at your premises at a convenient time to you including lunchtimes and early evenings with free refreshments provided.

To arrange a seminar please return this fax-back form or email cpd.uk@icopal.com stating your preferred subject choice(s):
